# Setting Up your Device

## Verify System Requirements

### Avast Business Antivirus Endpoints

#### Windows:

- 7 SP1 or higher, 8.x except RT and Starter Edition, 10 except Mobile and IoT Core Edition
- Server 2008 R2, 2012 R2, 2016, 2019, all any edition with latest service pack excluding Server Core
- Microsoft Exchange Server 2010 SP2, 2013, 2016, 2019
- Microsoft SharePoint Services 3.0 and SharePoint Server 2010 and higher

#### Mac:

- MacOS 10.10 (Mavericks or later with at least 500MB free disk space)

#### Linux:

- CentOS 7 and above
- Debian 8 and above
- Red Hat Enterprise Linux 7.4 and above
- Ubuntu LTS 16.04 and above

## Verify Firewall Requirements

For overall functionality, and to enable the Avast Business Antivirus clients to authenticate/update, you must allow certain ports and URL addresses through your Firewall or Proxy Server.

### Ports

#### TCP & UDP:

- 53 – Secure DNS services (only if using Real Site component)
- 80 – Internet Vulnerability Checks and Feature Updates
- 443 – FFL Encryption Key Negotiation (only if using Real Site component)

## URLs

- \*.avast.com
- \*.avcdn.net
- \*.mailshell.net (only if using Anti-Spam)

## Installing Avast Business Antivirus on Devices

For unmanaged Avast Business Antivirus, you can download the installer from <https://www.avast.com/installation-files>. Click on the Business tab and select either the Online or Offline installer for the Antivirus version you have. When the installer is downloaded, you can run it on the device you would like to install Antivirus on.

**If you select the Online installer, the other services will be downloaded upon installation of the Antivirus agent. This option is not recommended if you are installing Antivirus on multiple devices at the same, as each machine will individually contact Avast servers to download the other services.**

## Customizing Installation

1. Copy the installer file to a location accessible by the end device
2. Double-click on the installer file to run it
3. If asked to allow the application to make changes to your device, click **Yes**
4. Click **Customize**, then do one of the following:
  - Select **Recommended protection** to install all components
  - Select **Minimal protection** to install only File, Web, and Mail Shield
  - Select **Custom protection** so you can check and uncheck the specific components you would like to install.
5. Click **Install** and wait while Avast Business Antivirus is installed on your device
6. When prompted, restart the device

## Recommended Components for Servers and Workstations

A Business environment has different needs than those of consumers, and therefore certain components are not recommended for use in such a network even though they are available in Avast Business Antivirus.

## Recommended for Business Environments

The following components should be uninstalled completely or disabled by setting the sliders to **Off**:

- Real Site
- Wi-Fi Inspector

If these components are not removed, you may encounter instability in the network, slower computer operation, or errors.

## Recommended for Servers

The following components should be uninstalled completely or disabled on servers by setting the sliders to **Off** or by not installing them on the device entirely:

- Web Shield
- Mail Shield

## Activating Licenses on your Device

You can activate your Avast Business Antivirus subscription after you have installed the program on your device(s).

1. Open the Avast Business Antivirus UI on the device
2. Click **Menu**
3. Click **Enter activation code**
4. Type in your activation code/wallet key, then click **Enter**
5. If necessary, confirm the details of your subscription and the involved components

## Settings Configuration and Components

There are many components that come along with Avast Business Antivirus, both in the baseline Antivirus and in the Pro and Plus versions.

### Antivirus Components by Product License

Component	Avast Business Antivirus	Avast Business Antivirus Pro	Avast Business Antivirus Pro Plus
File Shield	X	X	X
Web Shield	X	X	X
Mail Shield	X	X	X
Behavior Shield	X	X	X
Remote Access Shield			X
Wi-Fi Inspector	X	X	X
Real Site	X	X	X
Firewall	X	X	X
Sandbox	X	X	X
Anti-Spam	X	X	X
Exchange		X	X
Sharepoint		X	X
Webcam Shield			X
SecureLine VPN			X
Data Shredder		X	X
Passwords			X
Password Protection			X
Software Updater	X	X	X
Browser Cleanup			X
Rescue Disk	X	X	X

### Enabling and Disabling Components

Many of the shields and tools available in Avast Business Antivirus can be enabled or disabled on the device. This is especially useful if you are trying to install only a few of the components on a server, or just keeping your number of tools to a minimum. Some tools, however, can only be installed or uninstalled entirely, such as Sandbox and Rescue Disk.

1. Open the Avast Business Antivirus client UI
2. Click on the proper tab for the component you are trying to enable or disable:
  - **Protection:** File Shield, Web Shield, Mail Shield, Behavior Shield, Sandbox, Wi-Fi Inspector, Real Site, Firewall
  - **Privacy:** Passwords, Anti-Spam, Data Shredder, Webcam Shield
  - **Performance:** Software Updater
3. Click on the button for the component
4. Beside the component you want to alter, do one of the following:
  - To enable the component, move the slider to **On**
  - To disable the component, move the slider to **Off**
5. If required, confirm your choice

## Installing and Uninstalling Components

Most Active Protection features are installed with Avast Business Antivirus, but these components can be uninstalled and reinstalled as needed via the Troubleshooting menu. MacOS X protection components cannot be installed or uninstalled but can be turned off.

1. Open the Avast Business Antivirus client UI
2. Navigate to **Menu** ▶ **Settings** ▶ **General** ▶ **Troubleshooting**
3. Click **Add/Modify Components**
4. Beside the components you want to alter, do one of the following:
  - If the component is not yet installed, check the box beside it
  - If the component is already installed, uncheck the box beside it
5. Click **Change** to confirm once you are finished making your edits

**For more details on configuring the various components available in the settings of Avast Business Antivirus, see [Configuring Settings in Avast Business Antivirus](#).**

# Configuring Exclusions

## Wildcards

Many of the Shields and other components included in Avast Business Antivirus, as well as the main Antivirus itself, enable you to configure exclusions or block specific paths. Wildcards help when you do not know the exact file path or file name of files you want to include or exclude, or if you want to indicate multiple files in one path. Not all file paths allow the use of wildcards.

Character	Meaning
?	Replaces a single character <b>For example:</b> <code>ab?.html</code> matches the files <code>abc.html</code> , <code>abd.html</code> , <code>abe.html</code> , etc. It will <b>not</b> match the file <code>abc.htm</code> .
*	Replaces zero or more characters <b>For example:</b> <code>*mtl</code> matches the files <code>abc.html</code> and <code>d.html</code> . <code>*txt</code> matches the files <code>abc.txt</code> , <code>x.txt</code> , and <code>xyztxt</code> .

## Exclusions

You can configure exclusions that will propagate across all of the various Shields and components of Avast Business Antivirus in the *Exceptions* tab of the **Settings** ► **General** page.

## Adding Exceptions

1. Open the Avast Business Antivirus client UI
2. Click **Menu** in the top-right, then **Settings**
3. In the **General** ► **Exceptions** section, click **Add Exception**, then do one of the following:
  - Enter or browse to a file path you would like to exclude
  - Enter or browse to a folder path you would like to exclude
  - Enter a URL you would like to exclude
4. Click **Add Exception** when you are finished

## Configuring Automatic Updates

You can automatically update the virus definitions and Avast Business Antivirus program version on your device(s) when new updates are available. You can also set your device(s) to update manually. For more information, see [Updating Avast Business Antivirus](#).

### Configuring Automatic Updates

1. Click **Menu** in the top-right of the UI
2. Click **Settings**
3. In the *General* section, navigate to the **Update** tab
4. Beside the two **Check for Updates** buttons, click **More options**
5. Select **Automatic Update**

## Creating and Configuring Scans

You can configure the types of files and programs that are scanned by Avast Business Antivirus in the Virus Scans settings. Therefore, the main details for what will be scanned are configured in the scan settings, while exclusions are configured in the General section.

### Types of Scans

- **Full Virus Scan**—Run an in-depth scan of your system, checking all hard drives, rootkits, and auto-start programs
- **Targeted Scan**—Scans only the folders you select when you initiate the scan
- **Explorer Scan**—Performs a scan of folders or drives that you specify, but is only available in the Windows context menu when you right-click on a file, folder, or drive
- **Boot-time Scan (MS Windows only)**—Runs a scan when the device boots up

**You can access the settings for the various scan types by clicking Menu ▶ Settings, then navigating to Protection ▶ Virus Scans.**

## Customizing Full Virus Scans

### Sensitivity

You can determine the sensitivity of the scan by adjusting the scan sensitivity settings. The higher the sensitivity, the higher the protection and potential for false positive malware detections. Reducing the sensitivity reduces the chance of false positive detections, but may also reduce the effectiveness of the scans. Scan sensitivity can be adjusted to Medium, High, or Low sensitivity by dragging the slider.

**Scan for potentially unwanted programs (PUPs):** enables Avast to scan for programs that are stealthily downloaded with other programs and can perform unwanted activity

**Follow links during scan:** enables Avast to scan other files used by the files being scanned for potentially harmful content

**Test whole files (very slow for big files):** enables Avast to scan entire files rather than only the parts typically affected by malicious code

**Scan priority:** determines how many resources can be utilized by Avast during the scan. Higher priority means a faster scan, but may slow down other processes on the device

### Scan Areas

Select or tick the boxes beside the listed areas to include them in your scan. The main area options are:

- **All harddisks:** enables Avast to scan all hard drives on your PC
- **System drive:** the options in this section apply to data that is stored on physical devices such as hard drives and USB sticks

The following options for scanning will be applied to the area specified above.

**All removable media:** enables Avast to scan applications that launch automatically when you insert a USB or other removable device into your PC

**Rootkits:** enables Avast to scan for hidden threats in the system

**UEFI BIOS:** enables Avast to scan the main firmware interfaces during boot-up

**CD-ROM & DVD drives:** enables Avast to scan CD and DVD drives for malicious content

**Modules loaded in memory:** enables Avast to scan applications and processes that launch after system startup or run in the background

### Packers and Archives

In the Packers and Archives section you can specify the compressed file types that you want Avast to unpack during the scan.

- **Scan only common installers:** scans the contents of executable files utilized when installing applications
- **Scan all archives:** scans all archive file contents, which may slow down the scan considerably
- **Don't scan archives:** disables Avast from scanning archive files

### File Types

Specify the file types that are prioritized when scanning your PC for malware:

- **Content based types (slow):** scans files that are typically most vulnerable to malware attacks
- **Name extension based types (fast):** scans files with only risky extensions, such as .exe, .com, .bat
- **Scan all files (very slow):** scans all files on your PC for malware

**Perform automatic actions during this scan:** enable this option and define the automatic action when an infected file is found:

- **Fix automatically:** enables Avast to repair the infected file. If repair is not possible, the file is moved to the Virus Chest, and if that fails the file is deleted
- **Move file to Virus Chest:** the infected file will not be repaired automatically, but will be moved to the Virus Chest
- **Delete File:** Avast will not try to repair the infected file or move it to the Virus Chest, instead the file will be deleted automatically

**Shut down computer after scan finishes:** enables Avast to shut down your computer after the scan completes

**Generate report file:** enables Avast to create and store a report file automatically. The report file location is listed beneath this option.

## Exceptions

Although it is not recommended to exclude any files or folders from a scan, you can define certain exceptions to temporarily exclude particular files or folders from a scan for troubleshooting purposes. At the bottom of the scan settings page, click **View exceptions**. From there you can follow the steps in [Configuring Exclusions](#).

## Customizing Targeted Scans

### Sensitivity

You can determine the sensitivity of the scan by adjusting the scan sensitivity settings. The higher the sensitivity, the higher the protection and potential for false positive malware detections. Reducing the sensitivity reduces the chance of false positive detections, but may also reduce the effectiveness of the scans. Scan sensitivity can be adjusted to Medium, High, or Low sensitivity by dragging the slider.

**Scan for potentially unwanted programs (PUPs):** enables Avast to scan for programs that are stealthily downloaded with other programs and can perform unwanted activity

**Follow links during scan:** enables Avast to scan other files used by the files being scanned for potentially harmful content

**Test whole files (very slow for big files):** enables Avast to scan entire files rather than only the parts typically affected by malicious code

**Scan priority:** determines how many resources can be utilized by Avast during the scan. Higher priority means a faster scan, but may slow down other processes on the device

### Packers and Archives

In the Packers and Archives section you can specify the compressed file types that you want Avast to unpack during the scan.

- **Scan only common installers:** scans the contents of executable files utilized when installing applications
- **Scan all archives:** scans all archive file contents, which may slow down the scan considerably
- **Don't scan archives:** disables Avast from scanning archive files

## File Types

Specify the file types that are prioritized when scanning your PC for malware:

- **Content based types (slow):** scans files that are typically most vulnerable to malware attacks
- **Name extension based types (fast):** scans files with only risky extensions, such as .exe, .com, .bat
- **Scan all files (very slow):** scans all files on your PC for malware

**Perform automatic actions during this scan:** enable this option and define the automatic action when an infected file is found:

- **Fix automatically:** enables Avast to repair the infected file. If repair is not possible, the file is moved to the Virus Chest, and if that fails the file is deleted
- **Move file to Virus Chest:** the infected file will not be repaired automatically, but will be moved to the Virus Chest
- **Delete File:** Avast will not try to repair the infected file or move it to the Virus Chest, instead the file will be deleted automatically

**Shut down computer after scan finishes:** enables Avast to shut down your computer after the scan completes

**Generate report file:** enables Avast to create and store a report file automatically. The report file location is listed beneath this option.

## Customizing Explorer Scans

### Sensitivity

You can determine the sensitivity of the scan by adjusting the scan sensitivity settings. The higher the sensitivity, the higher the protection and potential for false positive malware detections. Reducing the sensitivity reduces the chance of false positive detections, but may also reduce the effectiveness of the scans. Scan sensitivity can be adjusted to Medium, High, or Low sensitivity by dragging the slider.

**Scan for potentially unwanted programs (PUPs):** enables Avast to scan for programs that are stealthily downloaded with other programs and can perform unwanted activity

**Follow links during scan:** enables Avast to scan other files used by the files being scanned for potentially harmful content

**Test whole files (very slow for big files):** enables Avast to scan entire files rather than only the parts typically affected by malicious code

**Scan priority:** determines how many resources can be utilized by Avast during the scan. Higher priority means a faster scan, but may slow down other processes on the device

### Packers and Archives

In the Packers and Archives section you can specify the compressed file types that you want Avast to unpack during the scan.

- **Scan only common installers:** scans the contents of executable files utilized when installing applications
- **Scan all archives:** scans all archive file contents, which may slow down the scan considerably
- **Don't scan archives:** disables Avast from scanning archive files

### File Types

Specify the file types that are prioritized when scanning your PC for malware:

- **Content based types (slow):** scans files that are typically most vulnerable to malware attacks
- **Name extension based types (fast):** scans files with only risky extensions, such as .exe, .com, .bat
- **Scan all files (very slow):** scans all files on your PC for malware

**Perform automatic actions during this scan:** enable this option and define the automatic action when an infected file is found:

- **Fix automatically:** enables Avast to repair the infected file. If repair is not possible, the file is moved to the Virus Chest, and if that fails the file is deleted
- **Move file to Virus Chest:** the infected file will not be repaired automatically, but will be moved to the Virus Chest
- **Delete File:** Avast will not try to repair the infected file or move it to the Virus Chest, instead the file will be deleted automatically

**Shut down computer after scan finishes:** enables Avast to shut down your computer after the scan completes

**Generate report file:** enables Avast to create and store a report file automatically. The report file location is listed beneath this option.

## Customizing Boot-time Scans

### Sensitivity

You can determine the sensitivity of the scan by adjusting the scan sensitivity settings. The higher the sensitivity, the higher the protection and potential for false positive malware detections. Reducing the sensitivity reduces the chance of false positive detections, but may also reduce the effectiveness of the scans. Scan sensitivity can be adjusted to Medium, High, or Low sensitivity by dragging the slider.

**Scan for potentially unwanted programs (PUPs):** enables Avast to scan for programs that are stealthily downloaded with other programs and can perform unwanted activity

**Unpack archive files:** enables Avast to extract ('unpack') files and folders from archives for scanning

### Scan Areas

Select or tick the boxes beside the listed areas to include them in your scan. The main area options are:

- **All harddisks:** enables Avast to scan all hard drives on your PC
- **System drive:** the options in this section apply to data that is stored on physical devices such as hard drives and USB sticks

The following options for scanning will be applied to the area specified above.

**Auto start programs:** enables Avast to check all auto-start programs

**Perform automatic actions during this scan:** enable this option and define the automatic action when an infected file is found:

- **Fix automatically:** enables Avast to repair the infected file. If repair is not possible, the file is moved to the Virus Chest, and if that fails the file is deleted
- **Move file to Virus Chest:** the infected file will not be repaired automatically, but will be moved to the Virus Chest
- **Delete File:** Avast will not try to repair the infected file or move it to the Virus Chest, instead the file will be deleted automatically

**There are many more features and options available in Avast Business Antivirus. For more information, please see our Knowledge Base at <https://businesshelp.avast.com/>.**
